

Networking for Sustainable Transport

SaveGREEN project has been working closely with IENE, the Infrastructure and Ecology Network Europe. IENE is a network of experts working with various aspects of transportation, infrastructure and ecology. The network was initiated in 1996 to provide an independent, international and interdisciplinary arena for the exchange and development of expert knowledge – and with the aim to promote a safe and ecologically sustainable pan-European transport infrastructure. IENE arranges international conferences, workshops, training seminars and symposia, initiates collaboration projects and helps answering questions that require a joint international expertise. Every two years since 2010, IENE has organised an international conference on biodiversity and transport. These events are aimed at a broad international audience and cover a wide range of topics related to the impact of transport on habitats and species, mitigation measures and their effectiveness, and planning and policy issues.

SaveGREEN will support the IENE Conference that will take place in Cluj-Napoca, Romania from 19 to 23 September 2022 through expert involvement, workshops and a field trip to project pilot area.

Typically, each conference features a main theme and several special topics, but is also shaped by proposed workshops, sessions and presentations.

IENE conferences last from 3 to 5 days and include field trips, lectures, poster sessions, short workshops and training sessions. They provide a recurrent interdisciplinary forum for scientists, practitioners, government departments or planners and policy makers to present recent results, exchange experiences, discuss planned and ongoing activities and create a framework for future collaboration. Information about the conference is available at
